

### **Brush painted exterior doors**

How to touch-up painting/repaint: Wash the door with warm water to remove any dirt. Rub down with fine sandpaper (180 grit) along the grain.

Remove sanding dust with compressed air or a soft brush. Wipe with a soft rag. It is now possible to add any one-component colour.

We have used Jotun one-component Demi Dekk Ultimate Window. This colour can be bought at Jotun outlets throughout Sweden, visit [www.jotun.se](http://www.jotun.se)

### **Glazed entrance doors and entrance doors with decorative mirrors**

Regularly check that the silicone seal between the glass and the glass strip is intact. Silicone materials are broken down by weathering and that allows water to enter the structure and cause swelling and colour loss. Use silicon suited for glass (available from DIY stores in the building materials sector) for maintenance. NB! Do not use acetic based silicone. If the door blade has a decorative mirror, check that the joint between the door blade and the strip is intact.

During maintenance, use a silicone free, paintable building sealant.
